## **CANCER STATISTICS**

This report includes patients registered at the centers affiliated with the Shaukat Khanum Memorial Trust and accessioned into the hospital information system in Lahore. The affiliated centers include two hospitals called the ‘Shaukat Khanum Memorial Cancer Hospital and Research Center’ (SKMCH&RC) in Lahore and Peshawar and the Karachi Diagnostic Center (KDC). SKMCH&RC Lahore is the oldest center and has been functioning since December 29, 1994, SKMCH&RC Peshawar since December 29, 2015, and the KDC since 2010. For the purpose of presenting the results, all of these centers are referred to as SKMCH&RC/hospital in this report.

### **Distribution of neoplasms**

Of a total of 6,851 new neoplasms diagnosed or treated at the aforementioned facilities in Pakistan, from January 1, 2018 to December 31, 2018, 3254 were seen in male (47.5%) and 3597 (52.5%) in female patients. Six thousand, two hundred and seventy five (6275 (91.6%)) neoplasms were found in adults, whereas, 576 (8.4%) were seen in children. Children were classified as those 18-years or less and adults as more than 18-years of age. Table 1 shows the stratification of cases by behavior and age-group.

**Table 1. Distribution of neoplasms by behavior and age-group, from Jan. 2018 to Dec. 2018.**

<b>Behavior</b>	<b>Age-group</b>	<b>Registered patients ( 6,628)</b>	<b>Reported neoplasm*</b> <b>(6,851)</b>
<b>Malignant♦</b>	Adults	5,763	5,823

<b>Benign<sup>€</sup> &amp; Uncertain Behavior</b>	Adults	418	452
	Pediatrics	18	21
	Total	436	473

\* The difference in the number of registered patients and reported neoplasms is attributed to multiple malignancies and benign neoplasms diagnosed in 70 and 34 patients, respectively. Further, 119 patients have both malignant and benign neoplasm simultaneously.

♦ Cases with behavior code /3 and /2 are considered as malignant cases.

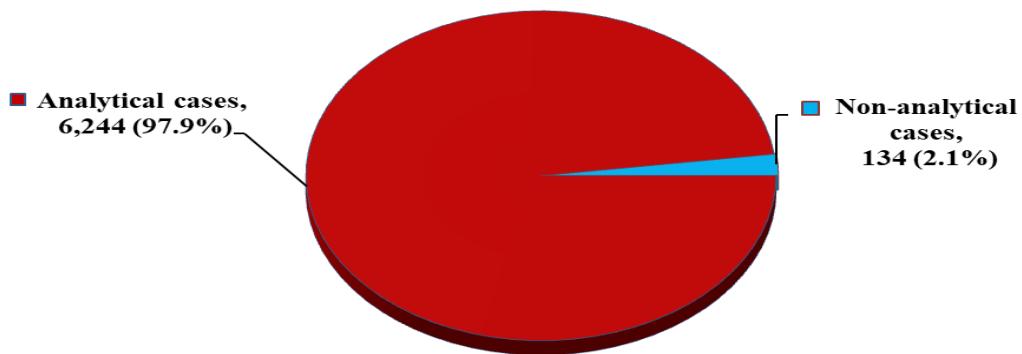

€ Cases with behavior code /0 and /1 are considered as benign and uncertain, respectively.

¥ According to the Facility Oncology Revised Data Standards (FORDS), Revised for 2004, Class of Case 0 to 2 are analytical cases and included in treatment and survival analysis, whereas, Class of Case 3 to 9 are non-analytical cases, usually not included in routine treatment or survival statistics.

## Class of Case

Of a total of 6,378 malignant cases recorded in the Registry from January 2018 to December 2018, 6244 (97.9%) were analytical cases and 134 (2.1%) non-analytical. Figure 1 shows the stratification of analytical and non-analytical cases<sup>Y</sup>.

## Demographics

Of the 6,378 malignant cancers, nearly 56.0% (3,574) belonged to the province of Punjab and approximately 25.2% (1,607) to Khyber Pakhtunkhwa (Table 3). The fact that the geographic area of residence of a vast majority of patients was Punjab can be explained in light of the information that the oldest affiliate is situated in the provincial capital of Punjab and that, this province accounts for almost 50% of the total population of the country.

## Staging

The Registry uses the American Joint Commission on Cancer TNM staging system for all analytical cancer cases. TNM categorizes cancers in stages 0, 1, 2, 3, 4, unstageable, and not applicable on all analytical cases (Class of Case 0, 1, 2). Cancers are classified as being unstageable as the patients may choose not to receive any treatment or undergo further tests at the hospital needed to establish an appropriate stage. “Not applicable” means non-availability of AJCC staging for that site. During the year 2018, cancer staging for 6,244 analytical cases (Class of Case 0, 1, 2) showed that 37 (0.6%) cases fell into 0 or in situ category, 940 (15.1%) in Stage I, 1,613 (25.8%) in Stage II, 1,433 (23.0%) cases in Stage III, and 1138 (18.2%) in Stage IV, (table 9); 345 (5.5%) cases were unstageable and 738 (11.8%) had no AJCC stage defined for that site.

**Table 9. TNM Stage of cancer patients at SKMCH&RC, from Jan. 2018 to Dec. 2018.**

AJCC Stage	Count	Percentage
Stage 0	37	0.6
Stage I	940	15.1
Stage II	1,613	25.8

## **Summary Stage**

The SEER Summary Staging Manual-2000 Codes and Coding Instructions were used to describe how far the tumor had spread from the organ or the site of origin. This manual consists of a one digit hierarchical code for each and every site. All analytical cases (Class of Case 0, 1, 2), were included to generate results. The cancer data for the year 2018 reflects that there were 0.6% in situ cases, 20.5% localized cancers, 40.9% regional cases, 20.4% distant, and there were 17.6% cases in which the summary stage was unknown.

## **Grade/Differentiation/Immunophenotype**

The International Classification of Diseases for Oncology, Third Edition (ICD-O-3), codes and guidelines have been used to categorize grade/differentiation/immunophenotype. All analytical cases (Class of Case 0, 1, 2), were included to generate results.

## **SUPPLEMENTAL INFORMATION**

Table 12 depicts the results stratified by primary site, age-group, and gender. According to this, cancers of the breast, colon, rectum, anal canal and anus, lymphoma and lip and oral cavity and skin are the commonest systems/site(s) for malignancies seen at SKMCH&RC. Table 13 shows the results stratified by gender, primary site, and Morphology.
