

ANNUAL CANCER REGISTRY REPORT-2009

CANCER STATISTICS

Distribution of neoplasms

Of a total of 3,836 new neoplasms diagnosed or treated at the Hospital from January 01, 2009 to December 31, 2009, 1,885 were seen in male (49.14%) and 1,951 (50.86%) in female patients. Three thousand, four hundred and thirty one (3,431 ((89.44%))) neoplasms were found in adults, whereas, 405 (10.56%) were seen in children. Children were classified as those 18 years or less in age and adults as more than 18 years of age. Table 1 shows the stratification of cases by behavior and age-groups.

Class of Case

Of a total 3,614 malignant cases registered at the from January 2009 to December 2009, 3,288 (90.98%) were analytical cases and 326 (9.02%) were found to be non-analytical. Figure 1 shows the stratification of analytical and non-analytical cases[¥].

Data Source: Cancer Registry & Clinical Data Management, SKMCH & RC

* The difference in the number of registered patients and reported neoplasms is attributed to multiple malignancies and benign neoplasms diagnosed in 26 and 2 patients respectively. Also 36 patients have both malignant and benign neoplasm simultaneously.

* Cases with behavior code /3 and /2 are considered as malignant cases.

[€] Cases with behavior code /0 and /1 are considered as benign and uncertain, respectively.

[¥] Class of case 0 to 2 and 3 to 9 are considered analytical cases and non-analytical cases respectively according to the Facility Oncology Revised Data Standards (FORDS) Revised for 2004.

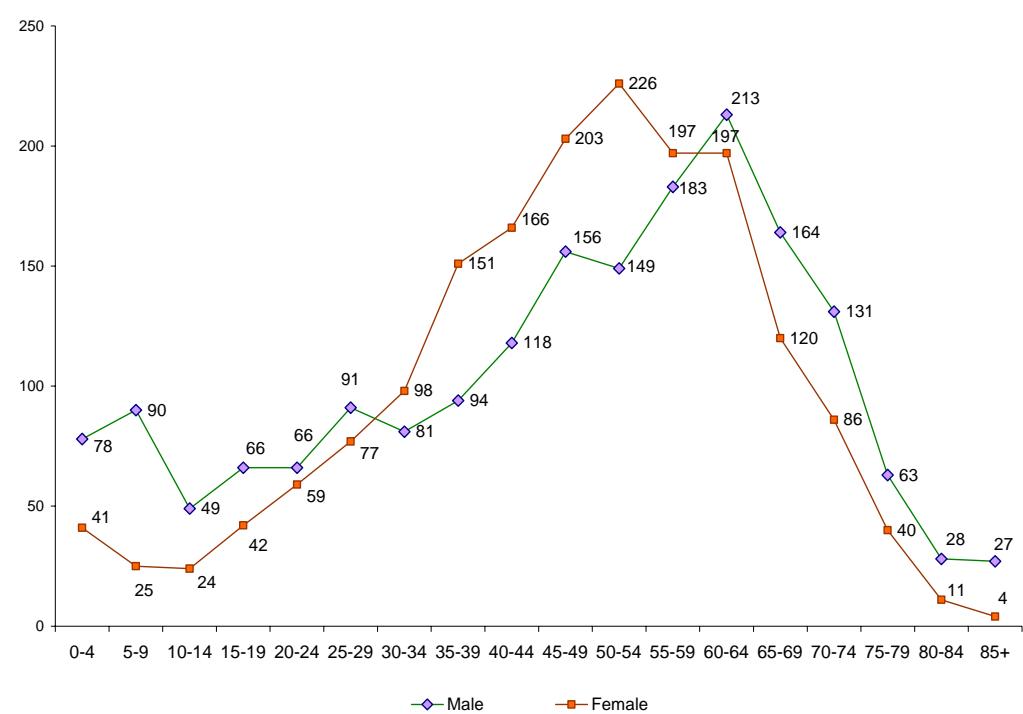

Distribution of malignancies

In the year 2009, 3,614 malignant cases were diagnosed at the Hospital with 1,847 seen amongst males and 1,767 amongst females. Table 2 displays the distributions of male and female patients according to age-groups and gender.

Demographics

Of the 3,614 patients diagnosed with malignant cancers, nearly 72.25% (2,611) belonged to the province of Punjab and approximately 18.90% (683) to the NWFP*. The fact that the geographic area of residence of a vast majority of patients was Punjab can be explained in light of the information that the Hospital is situated in the provincial capital of Punjab and that, this province accounts for almost 60% of the total population of the country.

Table 3. Province-wise distribution of patients

Province/Region	Patients	Percentage
Punjab	2,611	72.25
NWFP*	683	18.90
Sindh	47	1.30
Federal Capital	62	1.72
Balochistan	45	1.05
F.A.T.A	27	1.63

* NWFP renamed as Khyber Pakhtoonkhwa on April 01, 2010.

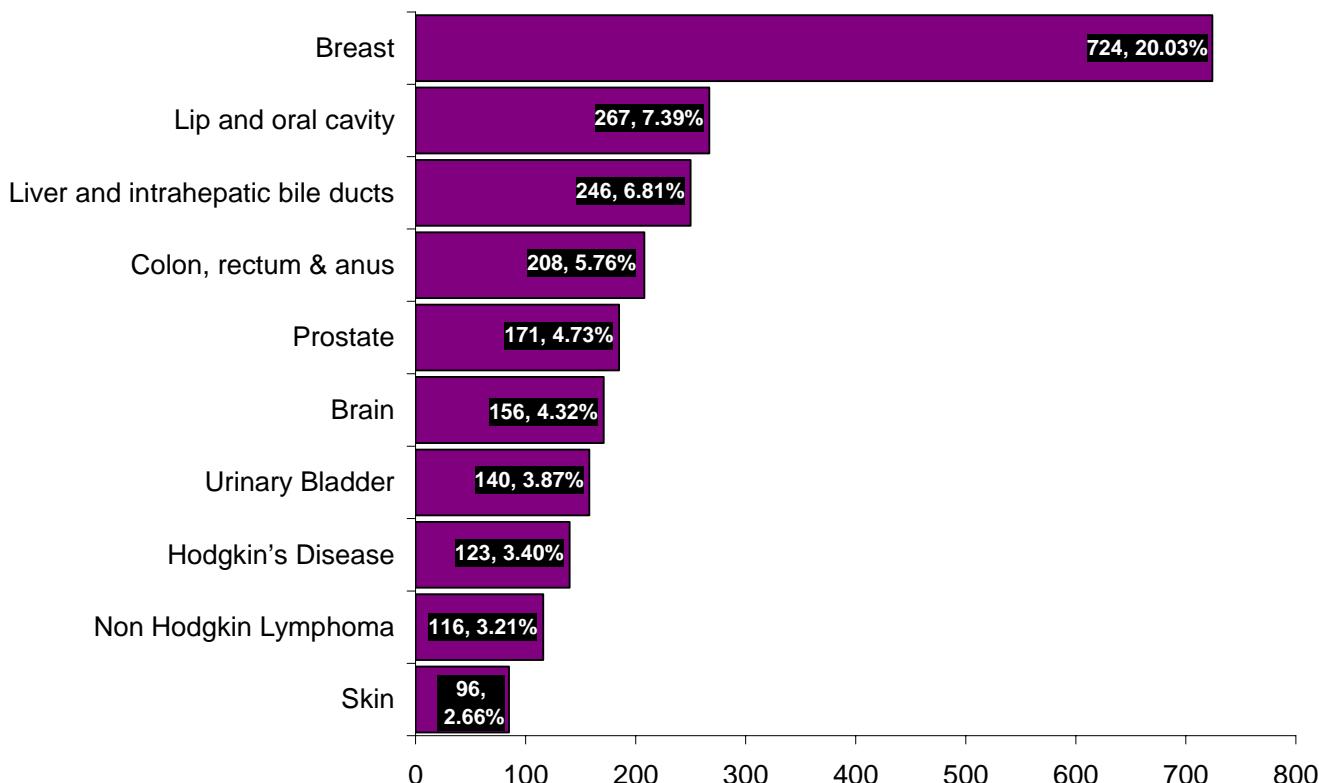

Top Ten Cancers

Table 4 shows the list of the ten commonest malignancies seen at SKMCH & RC during the year 2009. Breast cancer was the leading malignancy with 724 cases accessioned into the Registry. Lip & oral cavity cancer and liver & intra-hepatic bile ducts cancer were the second and third most frequently seen cancers, respectively.

Staging

The Registry uses the American Joint Commission on Cancer TNM staging system for all analytical cancer cases. TNM categorizes cancers in stages 0, 1, 2, 3, 4, unstageable, and not applicable on all analytical cases (Class of case 0, 1, 2). Cancers are classified as being unstageable as the patients may choose not to receive any treatment or undergo further tests at the Hospital needed to establish an appropriate stage. "Not applicable" means non-availability of AJCC staging for that site. During the year 2009, cancer staging for 3,288 analytical cases (class of case 0, 1, 2) showed that 31 (0.94%) cases fell into 0 or in situ category, 451 (13.72%) in stage I, 827 (25.15%) in stage II, 736 (22.38%) cases in stage III, and 591 (17.97%) in stage IV, (table 9); 351 (10.68%) cases were unstageable and 301 (9.15%) had no AJCC stage defined for that site.

Table 9. Cancer stage of patients at SKMCH & RC during year 2009.

AJCC Stage	No. of Patients	Percentage
Stage 0	31	0.94
Stage I	451	13.72
Stage II	827	25.15
Stage III	736	22.38
Stage IV	591	17.97
Unstageable	351	10.68
AJCC stage not defined	301	9.15
Total	3288	100.00

Summary Stage

The SEER Summary Staging Manual-2000 Codes and Coding Instructions were used to describe how far the tumor had spread from the organ or the site of origin. This manual consists of a one digit hierarchical code for each and every site. All analytical cases (Class of case 0, 1, 2) were included to generate results. The cancer data for the year 2009 reflects that there were 0.79% in situ cases, 24.91% localized cancers, 42.37% regional cases, 17.18% distant, and there were 14.75% cases in which the summary stage was unknown.

Table 10. Classification according to the SEER summary stage during the year 2009.

SEER Summary Stage	No. of Patients	Percentage
In situ	26	0.79
Local	819	24.91
Regional	1393	42.37
Distant	565	17.18
Unknown	485	14.75
Total	3288	100.00

Grading

International Classification of Diseases for Oncology, Third Edition (ICDO-3) codes and guidelines being used to categorize grades for solid malignancies. All analytical cases (Class of case 0, 1, 2) were included to generate results.

SUPPLEMENTAL INFORMATION

Table 12 depicts the result stratified by primary sites, age-groups, and gender. According to this, cancers of the breast, liver, oral cavity and lymphoma are the commonest systems/site(s) for malignancies seen at the Hospital.
